Environmental Physiology of Aquatic Animals

Message from the Guest Editor

The survival and reproduction of aquatic animals are closely tied to the water environment in which they live. Factors such as the water temperature, salinity, dissolved oxygen, and pH value play a crucial role in determining the wellbeing of aquatic animals. Studying the environmental physiology of aquatic animals can assist farmers in optimizing breeding conditions, enhancing efficiency, and reducing costs, ultimately promoting sustainable development in the aquaculture industry. Understanding the environmental physiological characteristics of aquatic animals is essential for comprehending their responses to environmental changes and predicting population dynamics. This Special Issue aims to highlight research on the physiological strategies of aquatic animals in adapting to various environmental conditions, along with the impacts of environmental factors on their growth, reproduction, behavior, and other physiological processes. Our findings will enhance the scientific basis for enhancing farming practices, as well as safeguarding and managing aquatic animal resources.

About the Journal

Message from the Editor-in-Chief

Fishes is a multidisciplinary open access journal focusing on reports of original research and critical reviews and synthesis from the broad area of fishes and aquatic animals. The ultimate objective of *Fishes* is to facilitate the discovery of connections between research areas, advancing science and filling knowledge gaps, and providing solutions for all present and future issues encountered in the sector of fisheries and aquaculture. As Editor-in-Chief, I encourage you to consider *Fishes* for your scientific papers and would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Maria Angeles Esteban

Department of Cell Biology and Histology, Faculty of Biology, University of Murcia, 30100 Murcia, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, FSTA, and other databases.

Journal Rank:

JCR - Q2 (Marine and Freshwater Biology) Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.4 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the second half of 2024).
