Message from the Guest Editor

Dear Colleagues,

Nonlinear waves are widely present in both nature and in artificial systems. Examples of such waves are surface gravity waves, surface capillary waves, internal waves in the ocean and atmosphere, Rossby waves in the ocean, and plasma waves. The most famous example of a model system for such waves is the celebrated Fermi–Pasta–Ulam–Tsingou chain introduced in the fifties in Los Alamos Lab to study the heat propagation in crystals.

The first numerical simulation of nonlinear waves was the numerical experiments conducted by Fermi, Pasta, Ulam, and Tsingou on their chain in Los Alamos. Numerical experiments of nonlinear waves are carried out ever since. We went a long way since then, with multiples CPUs, multiple cores, GPUs, and even quantum computers.

In modern times, numerical experiments are even seen as a legitimate replacement for real-life experiments.

This Special Issue will provide an opportunity to share modern cutting-edge research on modelling nonlinear waves on modern computers to gain insights into the nonlinear wave propagation and interactions.

Message from the Editor-in-Chief

Fluids (ISSN 2311-5521) is an international journal on all aspects of fluids in open access format: research articles, reviews and other contents are released on the internet immediately after acceptance. You are invited to contribute a research article or a comprehensive review for consideration and publication in *Fluids*. The scientific community and the general public have unlimited free access to the content as soon as it is published. Please consider *Fluids* as an exceptional, exciting enterprise ready to reward your trust, attention, and active participation.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q2 (*Mechanical Engineering*)
