### Message from the Guest Editors

Dear colleagues,

The extent of fruit and vegetable loss reaches up to 40–50 % in some countries, and the post-harvest loss of fruit and vegetable is a global problem. Thus, reducing fruit and vegetable loss is one of the keys for enabling sustainable supply in the future. The reduction in fruit and vegetable losses will require the development and implementation of novel post-harvest technologies and equipment to maintain quality during handling and storage.

In this Special Issue, we invite submissions related to post-harvest technologies, equipment, packaging and cold chain management for fruit and vegetables. All aspects of the technological innovations, smart labels, functional packaging, and cold chain managements in reducing post-harvest losses of fresh fruit and vegetable will all be considered, including their mechanisms. Research articles and review articles are welcome.
