Message from the Guest Editors

The capacity of forests to continue to mitigate climate change depends on their ability to cope and adapt to global change drivers. The cyclic dynamics of wood formation are the primary biological process through which carbon is sequestered in plants. The wide variation observed in the timing of wood formation across geographical regions demonstrates the high plasticity of trees in adapting their growth to local environmental conditions. Generally, long-term series of tree-ring widths are thought to be equivalent to the total annual growth measured in autumn. However, this annual growth is the result of a gradual accumulation of cells, which lasts for at least 3–4 months. During this period, trees can experience cold events, drought stress, heat waves, and other disturbances. The main aim of this Special Issue is to gain an understanding of the patterns of seasonal growth phenology (timing and magnitude) and carbon allocation in different organs (e.g., stem, branch, and coarse root) of coniferous evergreen and deciduous broadleaved species. This issue therefore welcomes the submission of any research focused on the above-mentioned topics.

an Open Access Journal by MDPI

Editors-in-Chief

Prof. Dr. Cate Macinnis-Ng

Department of Biological Sciences, Faculty of Science, University of Auckland, Private Bag 92019, Auckland 1142, New Zealand

Message from the Editorial Board

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank: JCR - Q1 (Forestry) / CiteScore - Q1 (Forestry)
