Message from the Guest Editors

Wood, a composite of holocellulose, lignin, and extractives, provides a record of past environmental and ontogenic effects throughout the life of a tree. Species-specific genetic and ontogenic factors influence the biosynthesis of wood formation and, by extension, its chemical composition. Tree-ring research is a dynamic discipline that encompasses dendrochronology, dendroclimatology, and more recently dendrochemistry by including tree-ring wood features that can be measured. Biomacromolecules have not been considered thus far, mainly due to limitations imposed by classical wet chemistry methods. Recently, precise quantification at the semi-micro level based on analytical pyrolysis has opened up the opportunity to perform this analysis. Analyzing tree rings formed under extreme events as well as annual rings from preceding and subsequent years used as a control group constitutes an efficient way to overcome limitations.

We welcome submissions on the effects of extreme weather events or any climatic change on the biomacromolecular content and/or composition of wood.

an Open Access Journal by MDPI

Editors-in-Chief

Prof. Dr. Cate Macinnis-Ng

Department of Biological Sciences, Faculty of Science, University of Auckland, Private Bag 92019, Auckland 1142, New Zealand

Prof. Dr. Giacomo Alessandro Gerosa

Department of Mathematics and Physics, Catholic University of Brescia, I-25121 Brescia, Italy

Message from the Editorial Board

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank: JCR - Q1 (Forestry) / CiteScore - Q1 (Forestry)
