closed (28 February 2023)

Message from the Guest Editors

Correct identification, including the scientific name, of trees species is very important for the conservation of natural resources and results in the sustainable use and final applications of products with higher added value. Different techniques can be applied, destructive or non-destructive, using as base materials flowers, leaves, bark and wood, in solid or particulate form. Some examples are macroscopic and microscopic anatomical characterization, morphological characteristics, DNA analysis, spectroscopic techniques such as ultraviolet (UV), visible spectroscopy (VIS), infrared (IR), Raman, image analysis, etc., all with advantages and disadvantages; reaching different levels of identification, whether genus or species; some faster and cheaper; and others longer and higher cost. They are often complementary techniques and sometimes statistics and chemometrics can refine the results.

Potential topics include, but are not limited to the following:

- Wood anatomy;
- Image analysis related to tree parts (leaves, wood, bark);
- Spectroscopic techniques related to tree identification;
- Machine learning and chemometrics related to tree identification analysis.

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Giacomo Alessandro Gerosa

Department of Mathematics and Physics, Catholic University of Brescia, I-25121 Brescia, Italy

Message from the Editor-in-Chief

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank: JCR - Q2 (Forestry) / CiteScore - Q1 (Forestry)
