Message from the Guest Editor

The human impact of exceeding the buffer capacity of the ecosystem prevents the ecosystem from maintaining its normal structure and function. Ecological restoration becomes a means of solving the insurmountable part of engineering technology that is governed by thermodynamic laws in dealing with environmental problems.

The international community's efforts to address climate change initially focused on mitigating greenhouse gas emissions, but today's shift to carbon neutrality is the result of the correct recognition of this ecological background. The restoration of the forest, which is the most diverse and stable among the ecosystems, is a leading part of this paradigm shift. However, forest restoration is still often in conflict between afforestation and ecological restoration. In addition, for the restored ecosystem to maximize its function, reference information that places the introduced vegetation in the optimal ecological range is important.

This Special Issue is aimed at providing case studies of ecological restoration of forests that are achieved by accepting the principle of ecological restoration beyond afforestation.

Message from the Editor-in-Chief

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank: JCR - Q2 (Forestry) / CiteScore - Q1 (Forestry)
