Carbon Cycle in Forest Ecosystems

Guest Editor:

Prof. Dr. Chih-Hsin Cheng

School of Forestry and Resources
Conservation, National Taiwan
University, No. 1 Section 4,
Roosevelt Road, Taipei 106,
Taiwan

Deadline for manuscript
submissions:

closed (31 October 2022)

Message from the Guest Editor

The continuous flow of carbon from land and water through the atmosphere and living organisms makes up the global carbon cycle. It contains reservoirs where carbon is stored and features dynamic flows of carbon between the carbon pools. Forests are some of the largest carbon reservoirs on Earth, and the storage and release of carbon from these have a significant impact on the global carbon cycle. Forests absorb carbon from the atmosphere through carbon sequestration, which describes the uptake of carbon through photosynthesis. This carbon is then used to create new plant biomass and release carbon back to the atmosphere as dead plant matter decays. Forest succession, from young stand to old stand, and natural and anthropogenic disturbances, such as forest fires, landslides, pest outbreaks, and forest management, can affect the carbon cycle in forest ecosystems. We encourage studies from all fields, including experimental studies, monitoring approaches, and models to contribute to this Special Issue to promote knowledge and adaptation strategies for the preservation, management, and future development of forest ecosystems.

Special Issue

an Open Access Journal by MDPI

Editors-in-Chief

Prof. Dr. Cate Macinnis-Ng

Department of Biological Sciences, Faculty of Science, University of Auckland, Private Bag 92019, Auckland 1142, New Zealand

Prof. Dr. Giacomo Alessandro Gerosa

Department of Mathematics and Physics, Catholic University of Brescia, I-25121 Brescia, Italy

Message from the Editorial Board

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank: JCR - Q1 (Forestry) / CiteScore - Q1 (Forestry)
