Message from the Guest Editors

Genetic gain is the improvement in phenotypic or genetic value due to selection in a forest population over cycles of tree breeding. It can be improved through a shortened cycle period by integrated breeding strategies. Gene diversity serves as a way for populations to adapt to changed environments. Seed orchards are a tree improvement delivery system between tree breeding and forest regeneration and are leading suppliers of genetically improved seeds. The management of seed orchards should be fine-tuned accordingly to maximize genetic progress, while maintaining a sufficient adaptive diversity in forest stands, and to improve climate resilience. The tree improvement delivery system encompasses all aspects of tree breeding, starting with phenotypic selection and ending with the production of genetically improved seeds and seedlings. This process is paramount in determining the genetic gain and gene diversity trade-off to ensure that the maximum genetic gain and gene diversity in future forests are attained.

an Open Access Journal by MDPI

Editors-in-Chief

Prof. Dr. Cate Macinnis-Ng

Department of Biological Sciences, Faculty of Science, University of Auckland, Private Bag 92019, Auckland 1142, New Zealand

Message from the Editorial Board

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank: JCR - Q1 (Forestry) / CiteScore - Q1 (Forestry)
