### Message from the Guest Editor

Forest stands are subject to more frequent and intense stresses and deterioration due to the combination of unfavourable climatic conditions and impact of harmful biotic factors, mostly insect pests and fungal pathogens. The monitoring of health status provides baseline data on the distribution, occurrence and harmfulness of biotic agents or abiotic factors. The assessment of harmful impact and spread of the most important insect pests and fungal pathogens is essential for making decisions about their control. Remote sensing has great potential for vegetation mapping in complex landscapes due to the ultra-high-resolution imagery acquired, especially in protected forest areas. They obtain information for the sizes of areas of deteriorated by biotic, abiotic and fire damages, health status of vegetation, observation the habitat in which pests and diseases are spreading out.

We encourage studies from all fields, including experimental studies and monitoring approaches to contribute to this Special Issue in order to promote knowledge and adaptation strategies for the assessment of health status and deterioration, preservation and management of forest ecosystems.

an Open Access Journal by MDPI

## Editors-in-Chief

### Prof. Dr. Cate Macinnis-Ng

Department of Biological Sciences, Faculty of Science, University of Auckland, Private Bag 92019, Auckland 1142, New Zealand

### Prof. Dr. Giacomo Alessandro Gerosa

Department of Mathematics and Physics, Catholic University of Brescia, I-25121 Brescia, Italy

## Message from the Editorial Board

*Forests* (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

**Journal Rank:** JCR - Q1 (Forestry) / CiteScore - Q1 (Forestry)
