Message from the Guest Editor

Forests are biotic communities comprised of multiple interacting species. These communities can change in response to natural and/or anthropogenic disturbances. Along with trees, forest communities contain insects and microbes with multiple roles that may be independent of one another but are often interactive. These organisms can impact the ability of each species to survive and perform within a forest system as well as influencing the overall system dynamics. Some insects and microbes are intimately involved in ecosystem processes, such as nutrient cycling, nitrogen fixation and pollination. Some are long-established community members with known relationships that can affect forest health and management (e.g., bark beetles, defoliators, root rots), but these relationships are changing in the presence of anthropogenic disturbances. Other recently-arrived invasive species have changed community structure and dynamics (e.g., European woodwasp and sudden oak death). From a forest ecology and management perspective, these relationships and interactions require further investigation.

Message from the Editorial Board

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank: JCR - Q1 (Forestry) / CiteScore - Q1 (Forestry)
