Message from the Guest Editors

Dr. Jingli Yang Dear Colleagues,

Different threats such as drought, low temperature, heat, heavy metal, salt damage, pests and diseases are important factors restricting the growth of forest trees. Trees have a long growth cycle, and their resilience mechanisms are extremely complex; therefore, improving the resistance of trees to stress has always been a difficult problem for breeders. However, people can modify trees' resistance traits at the genetic level by using genetic engineering technology. This has given rise to a new era in the century of in-depth developments in tree breeding by molecular design. Finding some key regulatory genes of tree resistance to effectively improve the stress traits of trees would directly contribute to genetic improvement for stronger stress resistance and ultimately benefit tree breeding.

This Special Issue of *Forests* guides the genetics breeding of forest trees in response to different environmental stresses and explores the fields of genetics and molecular mechanisms of tree stress–resistance traits, seeking new breeding strategies that can improve trees' resistance against environmental stress.

Editor-in-Chief

Prof. Dr. Giacomo Alessandro Gerosa

Department of Mathematics and Physics, Catholic University of Brescia, I-25121 Brescia, Italy

Message from the Editor-in-Chief

Forests (ISSN 1999-4907) is an international and crossdisciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank: JCR - Q2 (Forestry) / CiteScore - Q1 (Forestry)
