Message from the Guest Editors

Over the last few years, responses of tropical forests to global change have received increasing attention. However, less attention was done on how global change, i.e. increased of drought, temperature, CO₂ and nitrogen (N) deposition, influences the belowground compartment, while it shows a main role in carbon (C) sink and biogeochemical cycles. In light of the recent COP21 Paris Agreement, it is essential to better understand the impacts of global change on soil C stock and storage to determine the level of climate mitigation required to achieve the agreed temperature goals. Tropical forests are currently subject to different antagonist processes which disrupt the soil C storage and alter the soil greenhouse gas (GHG) fluxes, creating a potential feedback mechanism for climate change. The articles in this special issue will contribute to increase our knowledge on the main environmental drivers, and their interactions, that are behind tropical forest soil functioning, including microorganism activities, stoichiometry diversity, soil-plant interactions and carbon storage mechanisms.

an Open Access Journal by MDPI

Editors-in-Chief

Prof. Dr. Cate Macinnis-Ng

Department of Biological Sciences, Faculty of Science, University of Auckland, Private Bag 92019, Auckland 1142, New Zealand

Prof. Dr. Giacomo Alessandro Gerosa

Department of Mathematics and Physics, Catholic University of Brescia, I-25121 Brescia, Italy

Message from the Editorial Board

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank: JCR - Q1 (Forestry) / CiteScore - Q1 (Forestry)
