closed (30 November 2022)

Message from the Guest Editor

Observed and projected trends in weather variability suggest that future fire regimes in boreal forests may differ from those observed over the 20th century. Paleo- and dendrochronological reconstructions inform us about the range of variability of historic fire activity, although it is still challenging to reconstruct the full range of relevant features of fire regimes (e.g., spatial metrics and severity) and convert these reconstructions into the estimates of fire impacts on particular ecosystem functions, such as C dynamics and biodiversity. Separation of climatic vs. human signals in fire records, both modern and reconstructed, remains a subject of vivid debate. Equally intriguing is research aiming to quantify the role of fire suppression in shaping fire activity across geographical scales. Further, knowledge on the effect of fire activity and its cessation on ecosystem functions is much needed to inform forest management and policy makers.

We hope that the forthcoming Special Issue will touch upon all these topics, providing an important and timely contribution to the fields of fire ecology, fire management, and beyond.

Message from the Editorial Board

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank: JCR - Q1 (Forestry) / CiteScore - Q1 (Forestry)
