

Defense Mechanisms of Forest Trees against Fungi

Guest Editors:

Prof. Dr. Teresa Lino-Neto

Centre of Molecular and Environmental Biology (CBMA), Department of Biology, University of Minho, Campus of Gualtar, 4710-057 Braga, Portugal

Prof. Dr. Paula Baptista

Mountain Research Centre (CIMO), Polytechnic Institute of Bragança, Campus de Santa Apolónia, 5300-253 Bragança, Portugal

Deadline for manuscript submissions:

closed (15 April 2022)

Message from the Guest Editors

Forest ecosystems comprise multiple fungal species with diversified ecological roles, particularly distinguished for causing forest tree diseases. The imminent changes to the climate are further threatening forest ecosystems, since the phytopathogen distribution and severity of fungal diseases are increasing, and the rate at which endophytes switch from mutualistic to pathogenic behavior is changing. To defend this, plants are able to build elaborate constitutive and inducible defense mechanisms. However, the resistance mechanisms are not always the same as those described in plant models and new information is required to understand forest tree defenses and strategies. We encourage studies from all fields related to the defense mechanisms of forest trees against fungal pathogens, especially those providing new information about constitutive and inducible defense mechanisms, the distribution and severity of fungal pathogens and control mechanisms, as well as management strategies for controlling fungal diseases. Both original works and reviews are welcome, in particular, if they promote knowledge and new strategies for the preservation and management of healthy forest ecosystems.

Message from the Editorial Board

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank: JCR - Q1 (Forestry) / CiteScore - Q1 (Forestry)
