Message from the Guest Editors

Forests are complex adaptive systems and their modelling involves substantial modeling challenges. In recent years, large datasets recording ecological variables have become widely available. These datasets provides opportunities to complement traditional experimental approaches with new generation predictive models of forest dynamics and data-driven discovery and hypothesis testing methods. These new approaches aim to evaluate vegetation and biochemistry dynamics at different spatial scales, from forests stands to the regional and continental scales. The underlying modeling challenges include three major components: (1) the use of individual-based models, as they are among the most suitable and promising tools for simulating complex-adaptive systems and interactions on multiple scales, (2) the development of different scaling methods that approximate individual-based processes, and (3) the investigation of various inverse problems to connect models with empirical data including imagery and 3D modeling.

an Open Access Journal by MDPI

Editors-in-Chief

Prof. Dr. Cate Macinnis-Ng

Department of Biological Sciences, Faculty of Science, University of Auckland, Private Bag 92019, Auckland 1142, New Zealand

Prof. Dr. Giacomo Alessandro Gerosa

Department of Mathematics and Physics, Catholic University of Brescia, I-25121 Brescia, Italy

Message from the Editorial Board

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank: JCR - Q1 (Forestry) / CiteScore - Q1 (Forestry)
