Message from the Guest Editor

Dear Colleagues,

The geographical ranges of plants in the world depend on many factors. One of the most important over the millennia has been, and is, the climate. The disappearance or expansion of the area covered by woody species as the foundation of forest ecosystems largely affects other species of plants, animals or fungi, and contributes to changes in the microclimate, matter circulation, and others. As a result of climate change, many species are doomed to extinction, and others may seize the opportunity to enlarge the area that they currently occupy. In both cases, scientists and foresters are faced with the challenges of properly preparing for these changes, examining them, trying to predict their effects, counteracting them and supporting selected species in expansion.

The aim of the Special Issue will be to explore different aspects of forest ecology and biology, evolution and biogeography of woody plant species.

Message from the Editorial Board

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank: JCR - Q1 (Forestry) / CiteScore - Q1 (Forestry)
