Message from the Guest Editor

Dear Colleagues,

Customers are becoming increasingly interested in the origin of their wood products. In particular, with respect to the discussion of sustainability and climate change, issues such as illegal cutting and fake certificates damage the positive image of wood as a sustainable and renewable resource. For this reason, methods for wood tracking from the forest to the final consumer are attracting increasing interest. This Special Issue aims to gather state-of-the-art methods for wood tracking and origin identification.

In particular, contributions covering the following subtopics are welcome:

Wood tracking methods in the forest;

Noninvasive and nondestructive methods for wood identification;

Wood quality prediction based on origin information;

Industrial tools for wood tracking.

Prof. Alexander Petutschnigg

Message from the Editorial Board

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank: JCR - Q1 (Forestry) / CiteScore - Q1 (Forestry)
