

## Special Issue

# Modeling Forest Physiology under Climate Change

### Message from the Guest Editor

Plant physiology regulates forest functioning and modulates carbon, water, and energy fluxes. Climate change drivers such as rising CO<sub>2</sub> concentrations, higher temperatures, and changing rainfall patterns are expected to affect plant physiological behavior. In addition, more frequent or intense extreme events such as droughts and heatwaves may have widespread and long-lasting impacts on future forest dynamics. Consequently, there is a strong need to understand how vegetation will respond to a changing climate and how these responses affect water, carbon, and energy fluxes as well as forest functioning and resilience in future environments. Models are useful tools for understanding and attributing observations to underlying processes, for investigating the effects of different drivers and the interactions among them, as well as for predicting the future state of forest ecosystems. For this Special Issue, I invite contributions investigating a wide range of plant physiological responses to climate change in forests from the leaf to the global scale. All contributions that include theoretical, process-based, or data-based modeling approaches are welcome.

## About the Journal

### Message from the Editor-in-Chief

*Forests* (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access. Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

#### Journal Rank:

JCR - Q1 (Forestry) / CiteScore - Q1 (Forestry)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.9 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the first half of 2024).
