Effect of Climate Change on Forest Growth and Phenology

Message from the Guest Editor

Stressors induced by climate change present significant potential risks to forests and challenges for adaptation strategies. On the one hand, forests are exposed to and threatened by ongoing climate change; on the other hand, forests have the ability to influence the course of climate change by regulating the water regime, carbon sequestration, and reducing climate extremes. Climate change cause latitudinal and vertical shift of tree species into more suitable habitats, or it can drive local persistence and adaptability. Forest adaptation by natural selection, epigenetic phenomena, gene flow, and phenotypic plasticity, in addition to forest management strategies, plays an important role in reducing the vulnerability of forests to climate change. It is therefore important not to see climate change only as a threat causing forest decline and disturbances, but also as an opportunity for developing innovative approaches in forest ecology and management, sustainable silviculture, and nature protection. For that reason, we are looking for new original research and review articles dealing with growth adaptation of forests to climate change.

About the Journal

Message from the Editor-in-Chief

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access. Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Editor-in-Chief

Prof. Dr. Giacomo Alessandro Gerosa

Department of Mathematics and Physics, Catholic University of Brescia,
I-25121 Brescia, Italy

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank:

JCR - Q1 (Forestry) / CiteScore - Q1 (Forestry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.2 days after submission; acceptance to publication is undertaken in 2.4 days (median values for papers published in this journal in the second half of 2024).
