Message from the Guest Editor

Dear Colleagues,

Extreme ultraviolet (EUV) waves are impressive coronal propagating disturbances that are best seen as intensity enhancements in EUV emission. EUV waves are also called “EIT waves”, “coronal bright fronts”, and “large-scale coronal propagating fronts”. EUV waves can provide potential diagnostics on coronal magnetic field strengths and coronal plasma parameters. Since the discovery of the first case, the EUV wave has been strongly debated in relation to the physical nature of a true wave or a pseudo wave. On the other hand, it is widely recognized that EUV waves are always associated with a variety of energetic eruptions, such as CMEs, flares, and filament eruptions. Benefiting from high resolution observations from the Solar Terrestrial Relations Observatory (STEREO) and the Solar Dynamics Observatory (SDO), an increasing number of EUV waves are being easily captured, including many small-scale cases that are associated with weak eruptions and present many new observational characteristics.

Message from the Editorial Board

Galaxies provides an advanced forum for studies related to astronomy, astrophysics, and cosmology, including all of their subfields. Different formats, such as specialized research articles, reviews, communications and technical notes are welcomed. Manuscripts containing original and creative research proposals and ideas are especially appreciated.

We encourage scientists to publish their astronomical observations and theoretical results in as much detail as possible. There is no restriction on the paper length and full experimental and methodological details, as applicable, should be provided. All papers will be peer reviewed promptly. On behalf of the distinguished members of the editorial board, I extend my welcome to all researchers working on these subjects to contribute to *Galaxies*.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), Astrophysics Data System, INSPIRE, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Astronomy and Astrophysics*) / CiteScore - Q2 (*Astronomy and Astrophysics*)
