

Special Issue

Signals in the Universe: Variable Stars and Transients as Physics Gauges

Message from the Guest Editors

We are so excited to invite the astronomical community to contribute to the Special Issue hosted by GALAXIES: “Signals in the Universe: Variable Stars and Transients as Physical Gauges”. The role of variable phenomena in the Universe as indicators of cosmic distances and other physical parameters is, in the most general way, at the very foundation of modern astrophysics. Right from the discovery of the first variable stars, through the well-known P-L relation of classical Cepheids discovered by Mrs. Leavitt, up until the most dramatic detection of gravitational waves produced by colliding black holes, variable phenomena in Astronomy have fundamentally contributed in many ways to a profound understanding of the physical Universe.

We aim to bring together contributions on topics related to variable stars and transient phenomena and their impact as indicators of local and global astrophysics. We shall be delighted in including theoretical, observational and numerical contributions and review-style articles related to these topics.

About the Journal

Message from the Editorial Board

Galaxies provides an advanced forum for studies related to astronomy, astrophysics, and cosmology, including all of their subfields. Different formats, such as specialized research articles, reviews, communications and technical notes are welcomed. Manuscripts containing original and creative research proposals and ideas are especially appreciated.

We encourage scientists to publish their astronomical observations and theoretical results in as much detail as possible. There is no restriction on the paper length and full experimental and methodological details, as applicable, should be provided. All papers will be peer reviewed promptly. On behalf of the distinguished members of the editorial board, I extend my welcome to all researchers working on these subjects to contribute to *Galaxies*.

Editors-in-Chief

Dr. Margo Aller

Department of Astronomy, University of Michigan, Ann Arbor, MI 48109-1042, USA

Dr. Jose L. Gómez

Instituto de Astrofísica de Andalucía (IAA-CSIC), Glorieta de la Astronomía S/N, 18008 Granada, Spain

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), Astrophysics Data System, INSPIRE, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Astronomy and Astrophysics) / CiteScore - Q2 (Astronomy and Astrophysics)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 23.4 days after submission; acceptance to publication is undertaken in 4.8 days (median values for papers published in this journal in the first half of 2025).
