Government and Coalition Formation

Message from the Guest Editor

In parliamentary democracies, political parties bargain over the allocation of cabinet portfolios when forming coalition governments. For this reason, most theoretical models of government formation focus on the assumption that agents (the legislative parties) are primarily office-seeking. However, office-motivated politicians are interested not only in maximizing their office benefits but also in minimizing the “transaction costs” of the bargaining process over the government coalition policy. Two major research areas of government formation have emerged from this consideration. On the one hand, what coalition of parliamentary parties is more likely to form and what are the features, as size, ideological congruence, or previous government experience, that determine whether a coalition is more likely to emerge? On the other hand, what features make a government coalition more likely to survive and be stable?

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science),
MathSciNet, zbMATH, RePEc, EconLit, EconBiz, and other
databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 22.6 days after
submission; acceptance to publication is undertaken in 3.9
days (median values for papers published in this journal in
the first half of 2024).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review
reports receive vouchers entitling them to a discount on
the APC of their next publication in any MDPI journal, in
appreciation of the work done.
