Hydrogel Delivery Systems for Biomedical Applications

Guest Editors:

Dr. Yufei Ma

School of Life Science and Technology, Xi'an Jiaotong University, Xi'an 710049, China

Prof. Dr. Bo Lei

Frontier Institute of Science and Technology, Xi'an Jiaotong University, Xi'an 710049, China

Prof. Dr. Murugan Ramalingam

School of Mechanical Engineering, Vellore Institute of Technology, Vellore 632014, India

Deadline for manuscript submissions:

closed (28 April 2022)

Message from the Guest Editors

This Special Issue on “Hydrogel Delivery Systems for Biomedical Applications” is dedicated to recent developments from material design aspects to the synthesis, characterization, and biomedical applications of synthetic or naturally derived polymer-based hydrogel delivery systems.

Hydrogel delivery systems can exert therapeutic effects of delivered agents and have been used clinically, providing a spatially and temporally controlled release of a variety of therapeutic agents, including drugs, cells, and other bioactive substances (e.g., growth factors, cytokines, miRNA, and exosomes). Due to their tunable physiochemical properties and interactions with encapsulated agents, hydrogels with designed degradability can serve as a platform for the programmable release of therapeutic agents. In this Special Issue, the design of hydrogel delivery systems, especially focusing on chemical and physical properties of the hydrogel material and the encapsulated agent–hydrogel interaction, is involved. Meanwhile, different delivery mechanisms that can be integrated to play their roles in enhancing therapeutic effects are also discussed.

Message from the Editor-in-Chief

Gels (ISSN 2310-2861) is recently established international, open access journal on physical and chemical gel-based materials. The journal aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. General topics include but not limited to synthesis, characterization and applications of new organogels, hydrogels and ionic gels made either from low molecular weight compounds or polymers, composite and hybrid materials where a metal is by some means incorporated into the gel network, and computational studies of these materials in order to provide a better understanding of gelation mechanism. We cordially invite you to consider publishing with us and contribute with your own grain of sand to the advance in this fascinating field.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [PMC](#), [CAPlus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q1 (Polymer Science) / CiteScore - Q2 (Polymers and Plastics)
