## Gel Materials for Heritage Conservation

Guest Editors:

**Dr. Emiliano Carretti**

Department of Chemistry “Ugo Schiff” & CSGI Consortium,  
University of Florence, 50019  
Sesto Fiorentino, Italy

**Dr. Rosangela Mastrangelo**

Department of Chemistry and  
CSGI, University of Florence,  
50019 Sesto Fiorentino, Italy

**Dr. Damiano Bandelli**

Department of Chemistry,  
University of Florence, 50019  
Sesto Fiorentino, Italy

Deadline for manuscript  
submissions:

**closed (30 September 2025)**

### Message from the Guest Editors

The conservation and preservation of cultural heritage is of the utmost importance to safeguarding humanity’s rich history and promoting cultural continuity. Gel materials have emerged as valuable tools in heritage conservation owing to their unique properties, facilitating controlled cleaning, consolidation, and the protection of various types of historic artifacts. Hydrogels, for instance, exhibit excellent solvent retention abilities and are effective in cleaning fragile surfaces. Organogels, on the other hand, provide enhanced penetration abilities, making them suitable for consolidating porous materials.

Furthermore, the selection of appropriate gel materials depends on factors such as the type of artifact, desired cleaning mechanism, and compatibility with the substrate. Gel materials have revolutionized the field of heritage conservation, offering efficient and safe methods of preserving and restoring cultural artifacts.

We expect that key actors in the field will contribute to this discussion according to their areas of expertise, covering different types of gels such as hydrogels, organogels, emulgels, aerogels and gel-like materials.

## Editors-in-Chief

### Prof. Dr. Esmail Jabbari

Biomimetic Materials and Tissue Engineering Laboratory,  
Department of Chemical Engineering, University of South Carolina, Columbia, SC 29208, USA

### Prof. Dr. Chuanliang Feng

State Key Lab of Metal Matrix Composites, School of Materials Science and Engineering, Shanghai Jiao Tong University, Shanghai 200240, China

## Message from the Editorial Board

*Gels* (ISSN 2310-2861) is recently established international, open access journal on physical and chemical gel-based materials. The journal aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. General topics include but not limited to synthesis, characterization and applications of new organogels, hydrogels and ionic gels made either from low molecular weight compounds or polymers, composite and hybrid materials where a metal is by some means incorporated into the gel network, and computational studies of these materials in order to provide a better understanding of gelation mechanism. We cordially invite you to consider publishing with us and contribute with your own grain of sand to the advance in this fascinating field.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [PMC](#), [CAPus / SciFinder](#), and [other databases](#).

**Journal Rank:** JCR - Q1 (Polymer Science) / CiteScore - Q1 (Organic Chemistry)
