Designing Gels for Antibacterial and Antiviral Agents

Guest Editors:

Dr. Andrea Maria Chisnoiu

Dr. Andreea Iuliana Kui

Dr. Codruța Saroși

Dr. Smaranda Buduru

Deadline for manuscript
submissions:

30 November 2024

Message from the Guest Editors

Infections caused by bacteria pose one of the most serious threats to human health. In addition, a threat to human health worldwide has been posed by antibacterial-resistant bacteria (so-called “superbugs”) due to the widespread use of antibiotics. There are many clinical applications for antimicrobial gels, including wound healing. Further, antimicrobial gels are expected to stimulate new research and discoveries. To achieve progress in this field, an interdisciplinary approach is required to gain a deeper understanding of the structure of antibacterial gels and the mechanisms that underlie antimicrobial activity.

Recent advances in antimicrobial gels are the focus of this Special Issue on “Designing Gels for Antibacterial and Antiviral Agents”, which covers most aspects of antimicrobial gel fabrication, characterization, and applications. It will cover a broad range of topics, including the structure and behavior of antibacterial agents and gels, the antibacterial and antiviral mechanisms of gels, tissue regeneration, and antimicrobial gel applications.

Message from the Editor-in-Chief

Gels (ISSN 2310-2861) is recently established international, open access journal on physical and chemical gel-based materials. The journal aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. General topics include but not limited to synthesis, characterization and applications of new organogels, hydrogels and ionic gels made either from low molecular weight compounds or polymers, composite and hybrid materials where a metal is by some means incorporated into the gel network, and computational studies of these materials in order to provide a better understanding of gelation mechanism. We cordially invite you to consider publishing with us and contribute with your own grain of sand to the advance in this fascinating field.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [PMC](#), [CAPus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q1 (Polymer Science) / CiteScore - Q2 (Polymers and Plastics)
