Deadline for manuscript submissions:

**closed (15 November 2022)**

### Message from the Guest Editors

Large cohort studies have identified a huge number of weak- to moderate-effect loci associated with age-related diseases, therefore leaving a large part of the genetic variance unsolved. A portion of this “missing heritability” may depend on the effect of rare variants, and also on pleiotropic effects and epistatic interactions among genes. This consideration has moved research from single-SNP analysis to SNP–SNP interaction approaches. For various complex phenotypes, such interaction-based approaches have discovered bridges between different pathways and networks, thus offering new important clues on the underlying molecular mechanisms.

The aim of this Special Issue is to take stock of the situation and point to future directions in this field, by offering to the reader i) new analytical methodologies for performing interaction analysis, especially in large genetic datasets, and ii) papers on genetic interactions which shed a light on the molecular basis of age-related diseases.

Contributions by experts in the field in the form of research articles, reviews, and short communications are called for.

## Editor-in-Chief

**Prof. Dr. Selvarangan  
Ponnazhagan**

Experimental Cancer  
Therapeutics, The University of  
Alabama at Birmingham, 1825  
University Blvd., SHEL 814,  
Birmingham, AL 35294-2182, USA

## Message from the Editor-in-Chief

*Genes* is central to our understanding of biology, and modern advances such as genomics and genome editing have maintained genetics as a vibrant, diverse and fast-moving field. There is a need for good quality, open access journals in this area, and the *Genes* team aims to provide expert manuscript handling, serious peer review, and rapid publication across the whole discipline of genetics. Starting in 2010, the journal is now well established and recognised. Why not consider *Genes* for your next genetics paper?

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.

**Journal Rank:** JCR - Q2 (Genetics and Heredity) / CiteScore - Q2 (Genetics (clinical))
