Deadline for manuscript
submissions:

closed (15 February 2023)

Message from the Guest Editor

Dear Colleagues,

Alzheimer's disease (AD) is the most common neurodegenerative disorder, affecting over 55 million people, and this number is expected to increase exponentially with the increasing aging population worldwide. Some large scale genetic analysis trying to elucidate the cause of the AD has been carried out; however, the causes remain unclear.

In this Special Issue, we will focus on the genetic findings on AD which may facilitate early diagnosis by identifying the high-risk groups or those with faster cognitive decline. Studies related to genetic markers, genome-wide association studies, gene expression analysis, RNA-Seq and bioinformatic analysis on AD are welcome.

Dr. Suk Ling Ma

Message from the Editor-in-Chief

Genes are central to our understanding of biology, and modern advances such as genomics and genome editing have maintained genetics as a vibrant, diverse and fastmoving field. There is a need for good quality, open access journals in this area, and the *Genes* team aims to provide expert manuscript handling, serious peer review, and rapid publication across the whole discipline of genetics. Starting in 2010, the journal is now well established and recognised.

Why not consider *Genes* for your next genetics paper?

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.

Journal Rank: JCR - Q2 (*Genetics and Heredity*) / CiteScore - Q2 (*Genetics (clinical)*)
