Evolution of Non-coding Elements in Genome Biology

Guest Editor:

Dr. David Lando

Department of Biochemistry,
University of Cambridge,
Cambridge, UK

Deadline for manuscript
submissions:

25 August 2024

Message from the Guest Editor

The evolutionary process through which species mutate to change their heritable characteristics over time is one of the most fundamental processes that govern biological life on earth. While some mutational changes occur in gene coding regions, the vast majority occur in the non-coding portion of the genome, which contains many transposable elements and DNA repeats. Recent improvements in DNA sequencing and computational analysis are starting to reveal the role of these regions in the cis-regulation of gene expression. What is becoming apparent is that these changes can alter the binding of transcription factors and their chromatin regulators to change genome organization and function.

With this Special Issue, we will be focussing on the recent advances achieved in our understanding of the evolution of non-coding elements in genome biology. We encourage submissions that discuss novel findings or concepts concerning the structure, function, organisation and expression of genomes in the context of their relationship with either cis-regulatory transposable elements, natural genome diversity or disease progression.

Editor-in-Chief

Prof. Dr. Selvarangan Ponnazhagan

Department of Pathology, The University of Alabama at Birmingham, 1825 University Blvd, SHEL 814, Birmingham, AL 35294-2182, USA

Message from the Editor-in-Chief

Genes are central to our understanding of biology, and modern advances such as genomics and genome editing have maintained genetics as a vibrant, diverse and fastmoving field. There is a need for good quality, open access journals in this area, and the *Genes* team aims to provide expert manuscript handling, serious peer review, and rapid publication across the whole discipline of genetics. Starting in 2010, the journal is now well established and recognised.

Why not consider *Genes* for your next genetics paper?

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.

Journal Rank: JCR - Q2 (*Genetics and Heredity*) / CiteScore - Q2 (*Genetics (clinical)*)
