## The Double-Edged Role of Noncanonical Oncogenes and Tumor Suppressor Genes in Cancer Progression; An Oncojanus Function

Guest Editors:

**Prof. Dr. Giuseppe Gasparre**

Dept. of Medical and Surgical Sciences, Unit of Medical Genetics, Pol. S.Orsola-Malpighi, University of Bologna, via Massarenti 9, 40138, Bologna, Italy

**Dr. Anna Maria Porcelli**

University of Bologna, Italy, Dept. of Pharmacy and Biotechnology-FABIT, via Selmi 3, 40126, Bologna, Italy

Deadline for manuscript submissions:

**closed (31 December 2017)**

### Message from the Guest Editors

Dear Colleagues,

Current research in oncology is uncovering diverse properties of genes involved in cancer development and progression. To further complicate the already intricate pathway deregulation occurs in cancer cells, many genes in tumorigenesis have opposite effects on cancer progression according to the context and the type of mutations that they acquire, not to mention the gene dosage. This field of genetic oncology is relatively novel and requires a revisiting of the canonical concepts of oncogene and tumor suppressor gene. The roles of autophagy genes; AMPK; isocitrate dehydrogenase; metabolic enzymes; and even the well-known pleiotropic p53 ought to be gauged carefully in the balance between cancer promotion and inhibition. The Special Issue will collect contributions from experts in genes and proteins whose role in cancer progression has been ascertained, but remains controversial in terms of whether they play a pro- or an anti-tumorigenic role.

Prof. Giuseppe Gasparre

Prof. Anna Maria Porcelli

## Message from the Editor-in-Chief

Genes are central to our understanding of biology, and modern advances such as genomics and genome editing have maintained genetics as a vibrant, diverse and fastmoving field. There is a need for good quality, open access journals in this area, and the *Genes* team aims to provide expert manuscript handling, serious peer review, and rapid publication across the whole discipline of genetics. Starting in 2010, the journal is now well established and recognised.

Why not consider *Genes* for your next genetics paper?

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.

**Journal Rank:** JCR - Q2 (*Genetics and Heredity*) / CiteScore - Q2 (*Genetics (clinical)*)
