Deadline for manuscript submissions:

**closed (31 March 2019)**

### **Message from the Guest Editors**

Dear Colleagues,

Natural and cultural heritage worldwide often faces geological and human-induced processes that can potentially threaten its integrity, value and accessibility.

This special issue of GeoHazards aims to gather research articles, reviews, short communications and technical notes showcasing the use of aerial and satellite remote sensing technologies and their derived data to study geohazards in heritage sites and landscapes.

We welcome papers on the current scenarios of natural and human-induced threats to the conservation of heritage sites worldwide, focusing on:

- target geographical domain: local, regional, country or global scales;
- heritage category: UNESCO World Heritage (natural and cultural), Global Geoparks, and Biosphere Reserves; national parks, natural reserves, historic sites, listed buildings, or other world-, country- and regional-level heritage site designations.

Dr. Francesca Cigna
