Spatial-Temporal Monitoring of Environmental and Ecological Processes Using LiDAR

Guest Editors:

Dr. Yingkui Li

Dr. Qingwu Hu

Dr. Haidong Li

Dr. Robert Washington-Allen

Deadline for manuscript submissions:

closed (10 December 2022)

Message from the Guest Editors

The advantages of LiDAR (light detection and ranging) technology provide unique opportunities to monitor spatial-temporal changes in environmental and ecological processes. LiDAR sensors can be implemented in ground-, mobile-, aerial-, and space-based platforms with a variety of spatial and temporal resolutions. Although more and more studies have been conducted, there is still a need to develop novel methods and best practices in processing LiDAR data and effectively quantifying environmental and ecological processes. This Special Issue submissions of both research and review papers on innovative applications using various LiDAR sensors to monitor spatial and temporal changes in environmental and ecological processes. The following are a list of potential topics:

 Novel methods and best practices in LiDAR data processing, spatial-temporal monitoring of hillslope processes, fluvial processes, coastal processes, aeolian processes and revegetation, cryosphere processes, karst landforms and processes, tectonic landforms and processes, human-environmental interaction processes, ecosystem services and ecological processes.

Message from the Editor-in-Chief

Geomatics is an information technology discipline which integrates the tasks of gathering, storing, processing, modeling, analyzing, and delivering spatially referenced or location information.

Geomatics journal offers a new forum to promote multidisciplinary research over broad ranges geomatics innovative research and applications. Original contributions in the form of research papers, communications, letters, short notes, and reviews on all aspects of *Geomatics* are invited.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within ESCI (Web of Science), EBSCO, and other databases. **Rapid Publication:** manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.8 days after submission; acceptance to publication is undertaken in 4.1 days (median values for papers published in this journal in the first half of 2024).
