Message from the Guest Editor

Dear Colleagues,

Geochemistry and geochronology are powerful yet elegant techniques helping us to decipher the formation processes and conditions of a variety of mineral deposits. This Special Issue of *Geosciences* invites submissions that apply geochemistry (major and trace elements, stable and radiogenic isotopes, both on whole rock and on minerals) and geochronology ($^{40}\text{Ar}/^{39}\text{Ar}$, U/Pb, Rb/Sr) on a wide variety of mineral deposits and in a novel and original way. Submissions on novel developments, techniques and applications, review and critique papers, and papers documenting examples of successful applications are all welcome.

Message from the Editor-in-Chief

Understanding the Earth's origin and its bio-geological evolution, the multiple implications of the geosciences (as a coherent set of interconnected disciplines), and the sociocultural and ethical interdisciplinary approaches, will be crucial for a better understanding of Nature, and also for undertaking scientifically based political decisions.

We are committed to drive *Geosciences* to a position in which it is recognized for its high-quality, cutting-edge research and scientific influence, and strongly encourage and invite your participation and manuscripts.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), GeoRef, Astrophysics Data System, and other databases.

Journal Rank: JCR - Q2 (*Geosciences, Multidisciplinary*) / CiteScore - Q1 (General Earth and Planetary Sciences)
