Message from the Guest Editors

Dear Colleagues,

Satellite observations have unveiled many aspects of sea level and ocean circulation, such as the mean dynamic topography, the global mean sea level change, large-scale patterns of sea level variability, mesoscale eddies and fronts, propagation of planetary waves, ocean tides, etc. Combining satellite measurements with in situ observations and numerical models provides a three-dimensional view of the ocean state and how it evolves with time. Papers on all aspects of sea level and ocean circulation that utilize satellite measurements and combine them with in situ observations and ocean models for process-oriented studies are welcome in this Special Issue. Potential topics include but are not limited to the following:

- Global mean sea level rise;
- Regional and coastal sea level change;
- Variability of oceanic gyres and regional current systems;
- Regional heat divergence and deep-ocean warming;
- Meridional overturning circulation and how it relates to sea level changes;
- Atmospheric circulation and sea level variability;
- Dynamics of eddies, fronts, and planetary waves.

Message from the Editor-in-Chief

Understanding the Earth's origin and its bio-geological evolution, the multiple implications of the geosciences (as a coherent set of interconnected disciplines), and the sociocultural and ethical interdisciplinary approaches, will be crucial for a better understanding of Nature, and also for undertaking scientifically based political decisions.

We are committed to drive *Geosciences* to a position in which it is recognized for its high-quality, cutting-edge research and scientific influence, and strongly encourage and invite your participation and manuscripts.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), GeoRef, Astrophysics Data System, and other databases.

Journal Rank: JCR - Q2 (*Geosciences, Multidisciplinary*) / CiteScore - Q1 (General Earth and Planetary Sciences)
