### Message from the Guest Editor

Pain has a substantial impact on the well-being of older individuals residing in both community and nursing home settings. Unfortunately, persistent pain is frequently underdiagnosed and inadequately addressed. This condition not only curtails functional capabilities but also leads to a diminished quality of life, sleep disturbances, social isolation, depression, heightened healthcare costs, and increased resource consumption. Consequently, opioid abuse and behavioral shifts in patients have arisen, posing fresh clinical challenges for healthcare providers and affecting not only patients but also their families.

Our current Special Issue represents an exceptional opportunity to contribute to this groundbreaking field of pain. We encourage submissions encompassing various critical areas, including but not limited to

acute pain,

regional anesthesia for acute pain, chronic pain, cancer pain,

interventional pain techniques,

opioid management,

non-pharmacological therapy for pain,

pain management for pediatric patients, geriatric patients, and female patients.
