Message from the Guest Editors

Informal caregivers represent the primary source of support for older adults living with chronic diseases and disabilities. Chronic illnesses can impact caregivers (as well as older patients) from the onset of the diagnosis or symptoms throughout the disease's trajectory. The potentially harmful effects of caring on caregivers' mental, physical and social health have been widely documented and recognized. Thus, evidencing ways to support caregivers in their role has been and will continue to be a major public health issue.

The aim of this Special Issue is to provide updated evidence on psychosocial interventions designed to support informal caregivers of older people with chronic conditions. Well-design randomized controlled trials (RCTs), quasi-RCTs, mixed-methods intervention designs, pragmatic RCTs or Cluster-RCTs are desirable. Psychosocial interventions can include (but are not limited to) psychosocial support, skills training, multicomponent programs, peer support, psychoeducation, cognitive-behavioral therapy, self-management interventions, and counseling. Education-only intervention studies and systematic reviews (any type) will not be considered.

an Open Access Journal by MDPI

Editor-in-Chief

Message from the Editor-in-Chief

Healthcare is an international, scientific, peer-reviewed, open access journal on health care systems, industry, technology, policy, and regulation, and is published semimonthly online by MDPI. Ocular Wellness & Nutrition Society (OWNS) is affiliated with *Healthcare* and its members receive discounts on article processing charges.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), PubMed, PMC, and other databases.

Journal Rank: JCR - Q2 (*Health Care Sciences and Services*) / CiteScore - Q2 (*Leadership and Management*)
