Message from the Guest Editor

While clinicians are trained to save lives using technology and scientific developments to prevent death, prolonging life at the expense of patient suffering through nonbeneficial interventions is unacceptable. Unfortunately, this is prevalent in many healthcare systems today due to complex system and human issues. Nonbeneficial treatments are those medical interventions, medications, surgeries, and testing that will not make a difference to the prognosis of dying patients but can potentially harm them. It is time to reassess current approaches and welcome innovative ways to combat clinical inertia. Evidence-based strategies to improve care at the end of life should not perpetuate unnecessary patient suffering, carry false hope for families, or generate unsustainable care costs for the health system or service consumers. This Special Issue will feature a wide range of research reports bringing evidence-based clinician, health system, and consumer perspectives on how to improve management and decision-making near the end of life.

Message from the Editor-in-Chief

Healthcare is an international, peerreviewed, open access, multidisciplinary journal. Original research articles, short communications, review articles, and symposium highlights are welcomed.

Healthcare hopes to influence global health and disease aspects, and hopes to gain high visibility and acceptance by the scientific and healthcare community and will dedicate itself to covering special and specific topics in special issues.

We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), PubMed, PMC, and other databases.

Journal Rank: JCR - Q2 (Health Policy and Services) / CiteScore - Q1 (Leadership and Management)
