Deadline for manuscript
submissions:

closed (30 April 2022)

Message from the Guest Editors

Healthcare assistive tools and services are important for addressing health problems and improving the quality of life.

Ergonomics in healthcare assistive tools and services is focused on how to design these tools and services according to the users' characteristics, abilities, and limitations, i.e., on the basis of human-centered design. The requirements of the users should always be considered in the design process. Furthermore, usability evaluations of the healthcare assistive tools and services are necessary to confirm the safety, comfort, effectiveness, and satisfaction of the patients or users.

Professor Hsin-Chieh Wu is serving as Guest Editor of this Special Issue, with Prof. Min-Chi Chiu as Co-Guest Editor. If you would like to submit a manuscript or have questions concerning the submission of a manuscript, please contact the Guest Editors
