submissions:

closed (30 June 2023)

Message from the Guest Editor

Dear Colleagues,

Public health is not only about patients and medical procedures aimed at improving the health of the population, subpopulations, and target groups in diseases, or other further, but essential, aspects of it.

The quality of life, the costs of procedures, and disease prevention, as well as the costs of drugs, constitute critical elements of the national, continental and global strategy, as was perfectly demonstrated by the COVID-19 pandemic.

Pharmacoeconomics, health economics, and medical decision economics are just some of the essential elements of a health strategy, perceived differently in different countries.

This Special Issue entitled “Cost, Economic and Databases of Pharmaceutical Drugs in Public Health” is a unique opportunity to show the multifaceted nature of this issue, starting from costs and ending with the use of medical databases and systematic reviews in the effective use or allocation of resources for the treatment of patients (including drugs).

I cordially invite you and your staff to submit publications to this Special Issue.

Dr. Krzysztof Kus
