Message from the Guest Editor

Dear Colleagues,

With a growing geriatric population worldwide, frailty is becoming an increasingly important topic. Frail older people living independently in the community have a high risk for adverse outcomes. Therefore, it is important to identify frail community-dwelling older people as early as possible and to implement interventions that can prevent or delay poor outcomes. Therefore, it is important that we gain more knowledge about the assessment of frailty, determinants of frailty, the associations between frailty and adverse outcomes, perspectives of healthcare professionals on frailty, and most importantly, how to prevent frailty or poor outcomes.

This Special Issue of *Healthcare* seeks commentaries, original research, short reports, and reviews on frailty in community-dwelling older people. Both contributions based on quantitative and qualitative research can be submitted.

- frailty
- community-dwelling older people
- primary care
- prevention
- disability
- quality of life
- healthcare utilization
- mortality
- measurement
- determinants

Special Issue
