Message from the Guest Editor

In recent decades, advances in acute stroke care have enabled the early detection of stroke, which has greatly improved outcomes. As a consequence, stroke has become a largely treatable disease, and time is the factor with the greatest influence on the evolution and final prognosis of the patient in the short, medium and long term. However, despite the significant efforts made to reduce stroke care time, such as the training of emergency medical services staff, the improvement of the organization of care pathways with the installation of systems such as "Code Stroke", the creation of stroke units, the advances in the field of telemedicine or the implementation of outreach campaigns aimed at the general population, only a small percentage of patients benefit from the reperfusion treatments available in the acute phase, which prevents a significant benefit at the population level.

This Special Issue dedicated to the prehospital and hospital care of stroke patients is an opportunity to provide new insights into the prehospital and hospital management of stroke in the acute phase.

Message from the Editor-in-Chief

Healthcare is an international, peerreviewed, open access, multidisciplinary journal. Original research articles, short communications, review articles, and symposium highlights are welcomed.

Healthcare hopes to influence global health and disease aspects, and hopes to gain high visibility and acceptance by the scientific and healthcare community and will dedicate itself to covering special and specific topics in special issues.

We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), PubMed, PMC, and other databases.

Journal Rank: JCR - Q2 (Health Policy and Services) / CiteScore - Q1 (Leadership and Management)
