Message from the Guest Editor

Dear Colleagues,

As noted by Piotrowski (2014): "... the study of chronic pain in the elderly has developed into a sub-specialty" (p. 16). Indeed, with the rapidly aging population, more clinical research is essential to develop a better understanding of various issues in this population, such as the most effective pain management interventions, physical and mental health comorbidities, pain medication use (especially the use of opioids), etc. As a result, this Special Series will include the most updated articles addressing such issues.
