### Message from the Guest Editors

This Special Issue of Healthcare focuses on non-surgical, non-pharmacological, stroke secondary prevention. Following transient ischaemic attack (TIA) or stroke, rates of recurrence are high. The high rate of recurrence of stroke and other cardiovascular events indicates the need for early implementation of effective secondary prevention measures that address modifiable risk factors. International best practice guidelines for stroke secondary prevention, while aetiology-dependent, generally include medication prescription (anti-hypertensive, lipid lowering, anti-platelet/coagulant); high-level evidence supports this recommendation. Conversely, recommendations for lifestyle modifications have lower levels of evidence, largely drawn from primary prevention studies, and as a result, some population-attributable stroke risk factors (e.g., psychosocial stress) are inadequately addressed. Conclusive evidence is lacking on how best to support stroke survivors to engage in risk-reducing behaviours. This issue aims to help to redress the evidence imbalance and promote awareness of this important, under-researched topic.

## Message from the Editor-in-Chief

*Healthcare* is an international, peerreviewed, open access, multidisciplinary journal. Original research articles, short communications, review articles, and symposium highlights are welcomed.

*Healthcare* hopes to influence global health and disease aspects, and hopes to gain high visibility and acceptance by the scientific and healthcare community and will dedicate itself to covering special and specific topics in special issues.

We would be pleased to welcome you as one of our authors.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE and SSCI (Web of Science), PubMed, PMC, and other databases.

**Journal Rank:** JCR - Q2 (Health Policy and Services) / CiteScore - Q1 (Leadership and Management)
