

## Special Issue

# Diagnostic, Prognostic, and Therapeutic Pathways in Emergency Medicine and Critical Care

### Message from the Guest Editor

As healthcare providers in emergency medicine and critical care, we are faced with numerous questions every day: How can we make fast and well-informed clinical decisions? How can we make sure patients are treated at the right place in a timely manner? What tools and information are needed by patients and providers to improve acute healthcare? These questions lay the framework for research on diagnostic, prognostic and therapeutic pathways in emergency medicine and critical care. For this Special Issue of *Healthcare*, I'd like to invite you to submit original research as well as systematic reviews (including scoping and mapping reviews) on diagnostic, prognostic and therapeutic pathways in acute healthcare. This includes traditional interventional studies, as well as those on diagnostic and prognostic research. Both clinical- and health services research-oriented contributions are welcome.

- emergency medicine
- critical care
- diagnostic and prognostic research
- health services research
