

Special Issue

Minimally Invasive Techniques and Advanced Surgical Procedures

Message from the Guest Editor

Technical progress and continuous improvement of surgical techniques have massively shifted the limits of surgical procedures in recent years. More and more surgeries can be performed minimally invasively in cases that used to require major surgery. In addition, surgical interventions are currently possible for indications that could not be treated surgically in the past. I would like to invite you to submit your work to the Special Issue “Minimally Invasive Techniques and Advanced Surgical Procedures” to explore the extending limits of surgery. The topic of this Special Issue includes minimally invasive surgeries performed laparoscopically or robotically assisted; microsurgical procedures; less invasive techniques; radiologically guided interventions; the use of innovative surgical methods or medical devices; and extended indications with demanding surgeries of a higher degree of difficulty, beyond regular care surgery.
