## Dr. Iván Garrido González

Defense University Center at the Spanish Naval Academy, University of Vigo, Plaza de España 2, Marín, 36920 Pontevedra, Spain

Deadline for manuscript submissions:

31 December 2024

## **Message from the Guest Editors**

Dear Colleagues,

We would like to invite you to submit your work to this Special Issue of Heritage focused on "Advances in Built Heritage Conservation: Materials. Methods Management". The protection of heritage is of utmost importance due to its cultural, historical, and social value. This protection can be achieved through the following steps: (1) Improving the properties of the materials affected or to be used in heritage conservation, an area in which advancements in the use of nanomaterials are on the rise: (2) enhancing current intervention methods to minimize the risk of causing new alteration processes and to achieve effectiveness; implementing greater (3) documentation techniques, such as 3D laser scanning, and the early detection of pathologies through non-destructive techniques, such as infrared thermography, to enable the precise assessment of the state of historical buildings and to facilitate the planning of subsequent interventions; and (4) applying effective management techniques to ensure the long-term sustainability of heritage conservation efforts
