Crops, 21000 Novi Sad, Serbia

**Dr. Tijana Zeremski**

Institute of Field and Vegetable  
Crops, National Institute of the  
Republic of Serbia, Maksima  
Gorkog 30, 21000 Novi Sad,  
Serbia

Deadline for manuscript  
submissions:

**30 April 2025**

### Message from the Guest Editors

Plants produce many secondary metabolites. Some of them are volatile compounds, responsible for sensory and taste; therefore, they have wide applications in everyday life, in food, cosmetic and household products, aromatherapy, and well-being. However, plants synthesize these components to defend themselves against herbivores, pests, diseases, high temperatures, and other stressful agents, but over time humans has learned to use them for their own benefit. For years, man has selected plants and genotypes that are most suitable for the production of volatile components, i.e., essential oils, and also selected regions that are best for the production of certain plants. With the development of science and technology, the method of isolating volatile compounds also developed. With the development of awareness about environmental protection, the byproducts produced during the distillation of essential oils—hydrolates—are gaining more and more importance as products with added value. Additionally, encapsulation, polymerization, and other forms of the sustainable use of volatile components are rapidly developing and gaining importance.

## Message from the Editor-in-Chief

Horticultural plants and their products provide sustenance, health, and beauty. A confluence of factors is putting increasing pressure on horticultural production to evolve, and innovative research is addressing these challenges. *Horticulturae* provides a venue to communicate research results in a rapid manner with open access, allowing everyone the opportunity to stay abreast of leading research addressing horticulture. I invite you to consider publishing the results of your research in this high quality, peer-reviewed journal.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, FSTA, and other databases.

**Journal Rank:** JCR - Q1 (Horticulture) / CiteScore - Q2 (*Horticulture*)
