# Advances in Berry Crop Flavoromics, Secondary Metabolism and Regulation

Guest Editors:

### Prof. Dr. Qiuhong Pan

College of Food Science and Nutritional Engineering, China Agricultural University, Beijing 100083, China

#### Dr. Xiangyi Li

Department of Plant Science, School of Agriculture and Biology, Shanghai Jiao Tong University, Shanghai 200240, China

#### Dr. Keji Yu

Beijing Advanced Innovation Center for Tree Breeding by Molecular Design, Beijing Forestry University, Beijing 100083, China

Deadline for manuscript submissions: closed (25 November 2022)

## **Message from the Guest Editors**

Berries are rich in sugars, amino acids, organic acids, phenolic compounds such as phenolic acids, flavonols, and anthocyanins, and aroma compounds. These primary and secondary metabolites are greatly affected by both abiotic and biotic factors. Our understanding of how internal or external factors modulate the secondary metabolism and thus berry quality is of crucial importance for breeders and growers to develop plant material and viticultural practices to maintain high-quality berry and wine production. Particularly in the context of global warming, berry crop growth, maturation and flavor quality all have been affected significantly. The application of multi-omics integration approaches has promoted the rapid development of plant stress physiology, and provided opportunities to elucidate the mechanism underlying the formation and regulation of quality traits in berry crops. For this Special Issue, we welcome any original research or review articles that highlight recent advances in different disciplines related to berry crop flavoromics, secondary metabolism and regulation.

## Message from the Editor-in-Chief

Horticultural plants and their products provide sustenance, health, and beauty. A confluence of factors is putting increasing pressure on horticultural production to evolve, and innovative research is addressing these challenges. *Horticulturae* provides a venue to communicate research results in a rapid manner with open access, allowing everyone the opportunity to stay abreast of leading research addressing horticulture. I invite you to consider publishing the results of your research in this high quality, peer-reviewed journal.

## **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, FSTA, and other databases.

Journal Rank: JCR - Q1 (Horticulture) / CiteScore - Q2 (Horticulture)
