submissions:
closed (31 January 2024)

Message from the Guest Editors

Berry crops include (but are not limited to) the genera *Fragaria* (strawberry, Rosaceae), *Ribes* (currant and gooseberry, Grossulariaceae), *Rubus* (brambles such as raspberry and blackberry, Rosaceae), *Vaccinium* (blueberry, cranberry, and lingonberry, Ericaceae), and *Vitis* (grapes, Vitaceae). The rapid development and application of molecular biology and the completion of berry reference genome sequencing have promoted the development of developmental biology, genomics, proteomics, and metabolomics in berry crops and ultimately provide an important theoretical and working basis for genetic improvement as well as growth and developmental regulation in berry crops. For this Special Issue, we welcome any original research or review articles that highlight recent advances in different disciplines related to berry crop production, genomics, and breeding.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Horticultural plants and their products provide sustenance, health, and beauty. A confluence of factors is putting increasing pressure on horticultural production to evolve, and innovative research is addressing these challenges. *Horticulturae* provides a venue to communicate research results in a rapid manner with open access, allowing everyone the opportunity to stay abreast of leading research addressing horticulture. I invite you to consider publishing the results of your research in this high quality, peer-reviewed journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, FSTA, and other databases.

Journal Rank: JCR - Q1 (Horticulture) / CiteScore - Q2 (*Horticulture*)
