### Message from the Guest Editors

Dear Colleagues,

Due to new technologies being applied in cultivation, the production of high-quality fruits is increasing. As a result, fresh fruit trading is not only occurring in the domestic market, but also flourishing in the international market. Although high quality fresh fruits are needed in the market, the post-harvest losses of fruit are the biggest limitation in the fruit industry. In general, post-harvest losses refer to the loss of quality or quantity between the harvest and consumption of fruits. The loss rate varies among the types, varieties and preservation techniques of fruits.

The biotic and abiotic factors which influence the post-harvest losses of fruits have been widely discussed and reported. The combination of cultivation and storage techniques in order to reduce postharvest losses is the trend in maintaining fruit quality and prolonging storage life. This Special Issue aims to stimulate and collect studies in this area to merge pre-harvest cultivation and post-harvest technology to reduce the losses of fruits.

## Message from the Editor-in-Chief

Horticultural plants and their products provide sustenance, health, and beauty. A confluence of factors is putting increasing pressure on horticultural production to evolve, and innovative research is addressing these challenges. *Horticulturae* provides a venue to communicate research results in a rapid manner with open access, allowing everyone the opportunity to stay abreast of leading research addressing horticulture. I invite you to consider publishing the results of your research in this high quality, peer-reviewed journal.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, FSTA, and other databases.

**Journal Rank:** JCR - Q1 (Horticulture) / CiteScore - Q1 (Horticulture)
